**WINGREN LANDSCAPE**

In a continuing effort to bring you the best quality and service for All Things Outdoor, Wingren Landscape provides complete Erosion Control services. Wingren Landscape's Erosion Control Division offers the latest Erosion Control Installation Equipment backed by comprehensive and up-to-date training and servicing. And, you'll find we address your erosion control needs and complete the project at or below competitive prices. Our Erosion Control Division works year round and in all areas to service you where and when you need it. Our premier equipment includes a computerized blanket installer, a Finn T -170 (1500 gallon) Hydroseeder/Mulcher, a track blanket installer, and our Truax 3-box prairie and wild flower seeder.

## **COMPUTERIZED BLANKET INSTALLER**

The installer is a 3 point attachment that is capable of installing 2-4 acres of blanket per day, with an unlimited staple pattern to meet any erosion control specification. Our ability to change from a tractor to a skid steer gives us unlimited maneuverability and we are able to handle most, if not all, slope conditions. The five computer controlled air-powered staplers can drive staples in almost any weather condition. This machine reduces labor costs as it needs only two installers. In the future, perhaps late 2010, early 2011, this machine will be able to install biodegradable staples.

## **BLANKET UNROLLER**

Our blanket unroller allows us to apply blanket in wet areas without putting in heavy machinery further compacting the soil. Its standoff boom will unroll 500-yard, 8-foot wide rolls of blanket. We have procured distribution of high quality, low cost, large roll blankets throughout the United States. We can install all types of erosion control blankets and also non-woven geo textiles.

## **FINN T-170**

Our Finn Hydroseeder/mulcher is mounted on a tandem-axle truck which reduces ground pressure and it carries 300 feet of hose. Our crews are trained to apply anything from the most basic wood/paper mulch to the latest bonded fiber matrix hydraulic mulches. Our up-to-date training program and forward-thinking personnel constantly survey the market to keep ahead of the competition in the hydraulic mulch arena. The Finn T -170 can also be used for dust control, applying the latest in polymers to suppress job site dust. We are capable of hydroseeding/mulching up to 4 acres per day with a 2-man crew and local water supply.

## **TRUAX PRAIRIE SEEDER**

Our Truax prairie seeder is the newest acquisition to Wingren Landscape's erosion control division, built in the United States. Truax is the premier name in prairie seeding equipment. It has a proven reputation in delivering and installing the highest quality wetland, prairie, mesic, and forbs seeding. Little known to most people, the addition of a third box to the seeder allows Wingren Landscape to install low-maintenance seeds like patented Buffalo grass with precision. Given the rates and the expense of the seed, the micrometering attachment to this third seed box maintains quality output and precise placement, giving the seed the highest chance of germination. A cover crop can be placed separately. This allows precision metering of the more expensive seeds. The prairie seed is placed separately from the cover crop, preventing stratification of the prairie seed/cover crop combination as most broadcast seeders do.
